<sup>\*2018/2019</sup> season figures include imports up to 26 July 2019.

## Quality summary of imported wheat (1 October 2017 to 30 September 2018) (Previous season)

The quality of all wheat imported into South Africa is monitored by the SAGL. A subsample of all samples drawn by inspectors of the South African Agricultural Food, Quarantine and Inspection Services (SAAFQIS) of the Department of Agriculture, Forestry and Fisheries (DAFF) is forwarded to the SAGL for analysis. To assist with quality comparisons between local and imported wheat, the same scope of analysis is used for both sets of samples. The import quality results are published at the end of each production and marketing season.

For grading as well as dough and baking quality results of the imported wheat per country, please refer to pages 88 to 109. This imported wheat quality is compared to a summary of the local crop quality of the corresponding (2017/2018) season. To simplify the comparison between the quality of the different countries of import, the average quality per country was summarised in Table 9 on pages 86 and 87. The minimum, maximum and standard deviation per country was also calculated. Please take note of the number of samples analysed when comparing results, the higher the number of samples, the more reliable the average result will be.

A total number of 231 samples of wheat imported from the following eleven countries were received (number of samples received in brackets): Argentina (28), Canada (9), Czech Republic (6), Germany (27), Latvia (7), Lithuania (10), Poland (5), Romania (12), Russian Federation (99), Ukraine (10) and USA (18). Wheat imported for purposes other than bread baking (e.g. soft types for biscuit making) is included in this data set.

Most of the wheat imported to South Africa is blended with local wheat to obtain a certain milling and baking quality as per individual company specifications. Milling companies will blend higher and lower quality wheat to obtain the most cost-effective grist formulation that conforms to a specific quality. The main objective is to supply the most consistent quality of flour to their customers (bakers) as possible, as in the end, consistency is one of the most important quality parameters.
